

8 bite UVO Endeure 20/4

Key Barnett
Bill Stump also lpt

liber app - body notes - into guide
- list

liber - 2013 intro
asked by group on 1st of 1st
cycle dependent - many sent - 15 other entries
plan private meeting

PHD

liber - Stephen Tobi
3 days + gave me design
list + it in the me - list

liber people list (note)

liber → all app work
John + Brian also
Alan → design

University people?

Spec
MVP
Key - internal story
low prices
Maximum happy at work
Growth

the Stack

{pete@bryk.ie}

log 3

log

Refactor + add new features with evidence

Unit - not done

integration testing

E2E testing - take time to set up that environment

Deployment Issues

New feature is needed. Deploy on spec along with tests

for, deployment, test - alpha - release branches

1 is required to run tests
code coming from colleague
Use file paths

Members only Meeting

Need detailed logging

Setup

Open thread → Make sure all ~~are~~ contingency plans work
Chaos engineering - Amazon • lot of test bed at Amazon

Communication

Some more work

the Nick to get team using same software

this can be done
with next version
of the system
- next
1.6.0

He talks with

Need context for Lewis' language
Policies can be things for specs

Page 2

1. Speculation

Big plan how Lewis puts into real world
Chart/money

break idea down → that's not interpretation debate

Look for context → that's what you need to build

Spec Examples:

Because of pre-conceptions
eg. debtly account is an actual path
{ Not number of actual change }
Figure out your timeline

Minimum Viable Product

Make all errors → know your product

Learn about → iOS Swift

Choose some pointer

know → know some time with some pointer

to give more direction to get developed

Benefits of MVP

→ faster clear that is just an MVP -

feature group - do not give to some feature that can be

Not better much to two have designed for production
